Business Name: Bhangra Beats (Dance Academy)

Description of Business: I have thought of using the bhangra which is the folk dance of Punjab, India. If I ever get a chance of starting a business, it should be something that reminds me of my hometown and my culture in the foreign country. This academy will have proper classes, I have also thought f adding the idea of online classes due to the Covid-19 situation. The academy will be well-equipped with required props and highly experienced choreographers. We will also organize in-academy and outside-academy competitions to help our students gain confidence regarding their dancing skills. We also have a fully experienced team working on the idea of having a wonderful academy in this city.

Features: The project consists of 4 webpages. The first one is the home page which has the link to all the other webpages at the top in the navbar and has a used different styling and html ideas to output it. The second webpage is about the services available in the academy. I have used Google Fonts here to add some extra eye-catching font-style along with some pictures describing the text. The next page should be the About Us and Address page. This page has the image of the main head of the academy with the history of the academy and the addresses where we will be opening our branches. The last page is the Contacts page. This page has the contact number and social media handles of the academy. I have also added a form on the last page for the feedback to improve.
